

PRD: Cinematic Hero Scroll Transform and High-Contrast Typography

Status: Draft for Review

Target codebase: landing.html, dashboard.py

Last updated: August 2026

1. Summary

This specification outlines the visual upgrade for the Job Hunter Board landing page. It introduces a physical, scroll-triggered cinematic transformation where a full-bleed abstract hero background scales down into a rounded card structure, while the page theme shifts dynamically from near-black to a warm, organic off-white. The typography is standardized on a high-contrast pairing of a heavy grotesk font for main titles against a clean monospace font for labels and metadata.

2. Design Specifications

- 3 Colors Max: To align with strict minimalist design standards, the UI is restricted to three core color values:
 - * Near-Black (#0D0C0A): The starting backdrop theme for the landing page.
 - * Warm Off-White (#F5F2EB): The scrolled state body background.
 - * Yolk Yellow (#FFA700): The single accent color used for interactive nodes.
- High-Contrast Font Pairing:
 - * Space Grotesk (850-900 weight): Used for main headings, section titles, and logos.
 - * Space Mono: A monospace font family used for body copy, buttons, labels, and small metadata (such as column tags).
- Scroll-Triggered Hero Transform:
 - * At scroll position 0, the abstract background image spans full-bleed across the screen, matching the dark theme.
 - * As the user scrolls, a custom physics-weighted easement curve (cubic ease-out) is applied to scale the image container down to 75% width/height, rounding the corners up to 32px to form a contained grid card.
- Theme Transition:
 - * Concurrently with the hero scale, the background color shifts smoothly from near-black (#0D0C0A) to warm off-white (#F5F2EB).
 - * Text, nav containers, card surfaces, and borders invert their variables seamlessly, creating an organic physical transition.

3. Technical Implementation

- CSS Custom Properties: Bound directly to JS-controlled variables on the document root:
 - * --bg: rgb(R, G, B)
 - * --txt: rgb(R, G, B)
 - * --sur: rgba(...)
 - * --bdr: rgba(...)
- Event Handler: Scroll event listener attached to the global window object, calculating scroll-progress and ease-progress:
 - * $\text{easeProgress} = 1 - \text{Math.pow}(1 - \text{progress}, 2.5)$
- Asset Router: A new Flask endpoint `/hero_background.png` serving the abstract high-contrast header graphic.
